700 X 500	27.6" X 19.7"	7,5	0,29	5

MULTIMAT EVO is a premium 3-layer (multilayer) soundproofing material made of lightweight polymer compounds. It consists of an innovative acoustic membrane, a rubber soundproofing layer and a vibration-absorbing adhesive sealant. This product is easy to apply, nicely fits the contours and most importantly, absorbs vibrations instantly. Provides a high level of sound insulation - up to 35 dB. The material is waterproof (does not absorb water). It is recommended to use it for treating the floor of a car, or as a second layer on top of the sound dampening materials for places with a particularly strong noise load.

Recommended for:

floor, trunk floor, wheel arches.
