

CTK WAVEFIX PU

NOISE ABSORBING MATERIALS

This material is identical to the CTK WaveFix. The differential feature of the CTK WaveFix PU is a top layer of water-resistant black-colored polyurethane film. The wavy surface of the material effectively absorbs sound and provides a hermetic connection between the car body and interior plastic components. Due to latex infusion, the material provides a memory effect.

Recommended for:

roof, dashboard, door panels.

| SIZE | | THICKNESS | | SHEETS |
